RESEARCH DISCOVERIES

- Used advanced neural stimulation to enhance cognition
- Pinpointed brain regions critical for addiction and PTSD
- Pioneered a behavioral training paradigm to delay hearing decline

- Discovered a mechanism to explain why learning is more effective with breaks
- Demonstrated that cortex structure can evolve with experience in a single generation
- Developed next generation artificial intelligence to model complex learning

Launched the UC Davis Advancing Diversity in the Neuroscience Research Program to introduce undergraduate students to neuroscience through hands-on research experience and weekly seminars

TRAINING EXCELLENCE

- Created the Neuroscience Postdoc Career Development Program, offering panel discussions, guest speakers, workshops and networking activities to inform trainees of their next career opportunities
- Expanded the student-organized Seminar Outreach for Minority Advocacy series, which enhances the visibility of and facilitates candid discussions with underrepresented faculty

OUTREACH

- Celebrated NeuroFest's 5th anniversary, where more than 300 community members attended public lectures and experienced interactive booths
- Launched a \$75,000 campaign to permanently endow the Center's community outreach program, including NeuroFest and K-12 brain science education

\$672,600
Gifts from Individuals
in FY 2019
